

# Getting Started with Articles+: A Guide for Students

## About Articles+

Articles+ is a broad search of Yale Library's database content – including scholarly articles, newspaper and magazine articles, book reviews, and more – which means that Articles+ is a good place to start to find information on a wide variety of topics.

## Access Articles+

Articles+ is available from Quicksearch on the library's homepage ([library.yale.edu](http://library.yale.edu)).

- In Quicksearch you can retrieve results from Books+, Articles+, and Digital Collections.
- To isolate article results, select the option to “View and filter all results” where you can browse results or refine your search further (image 1).

## Articles+ Search Tools

When viewing all results in Articles+ there are a number of tools to help refine your search (image 2).

1. In the right column, Articles+ may match your search with entries from reference works, subject librarians at Yale, as well as related topics to your search.
2. Refine your search using the filters on the left to identify scholarly/peer-reviewed articles or to find a specific content type (newspapers, magazines).
3. Identify articles relevant to your research by reading article titles, author names, and publication dates. Use the “Preview” drop-down before you link to full-text.
4. Use the folder icon (“Save this item”) to save articles for up to 20 minutes. From the saved folder you can format citations, email a list of articles (including links), or export citations to a reference manager (RefWorks, Zotero).
